

CAPABILITY STATEMENT

WELCOME TO ARG!

WHO WE ARE

Australasian Response Group (ARG) is a leading provider of comprehensive Emergency Response and Safety solutions, serving the Mining, Oil and Gas, local government, and Aviation sectors. As part of a network of esteemed partner companies, we specialise in delivering tailored services that prioritise cost-effectiveness and risk mitigation across all phases of emergency management: *Prevention, Preparedness, Response, and Recovery*.

At ARG, our unwavering commitment to safety and preparedness underpins all our endeavors. We continuously strive for excellence and innovation, dedicated to supporting organisations in enhancing their emergency management capabilities and ensuring operational resilience. Whether it's in the mines, on an oil rig, or in the air, we're here to make sure everyone stays safe and your operations' business continuity are safeguarded.

OUR VISION

At ARG, our vision is to empower our clients in addressing safety concerns comprehensively: through *Prevention, Preparation, Response, Recovery*. We achieve this by providing cost effective risk based solutions tailored to their specific project requirements. Utilising trainers from a range of backgrounds such as military, public safety, mine rescue, security, medical, and technical mining services ensures we deliver high quality industry relevant emergency response training and solutions.

THE ARG APPROACH

PREVENT

Effective prevention begins with a thorough understanding of the risks associated with processes, projects, and personnel, followed by the proactive development of mitigation strategies. By identifying potential hazards early, we can implement tailored solutions to safeguard your operations and ensure the safety of your team.

PREPARE

Often associated with compliance and referred to as Planning, effective emergency management planning is grounded in the risks identified during prevention assessments. By systematically addressing these risks, we create robust plans that enhance preparedness and ensure a swift, coordinated response to any emergency.

RESPOND

The capability of site personnel and management to assist and intervene during and immediately following an emergency is crucial. The primary focus of response efforts is to save lives and protect assets, ensuring swift and effective action in critical situations.

RECOVER

Business continuity plays a significant role in the PPRR process, with the primary focus of recovery being to restore the project and its personnel to a state of full operability following a crisis. This phase involves evaluating the impact of the emergency, implementing corrective actions, and ensuring that all systems are functioning optimally to prevent future disruptions.

COMPLIANCE AND AUDITING

Utilising modern auditing technology, ARG is able to provide audit responses in real time while onsite with the client.

- Clinical Governance and Legal Compliance
- Emergency Preparedness
- Safety Management Systems
- Explosives Management
- Underground Fire Prevention
